LNA ARENA SPORT 600W Series

LNA ARENA SPORT

Highlights & Features

- Output power: max 600W
- Wide input voltage: 198-440VAC
- Ultra high Efficiency 97.5%
- Control method: DALI-2 & D4i and RDM/DMX
- Programmable output current range 700-2000 mA
- Constant Lumen Output (CLO)
- Smart Timer Dimming (STD)
- Wide dimming range 0.1-100%
- High-accuracy integrated power metering
- Input surge protection: DM 6kV; CM 10kV
- Max remote distance 300 meters
- Reliable IP66 input/output connectors
- Low current ripple (typ.1%) for HDTV broadcasting
- Afterglow effect free

Unit Weight: ~2.2kg

Dimensions (L × W × H): 285x100x49 mm

General Description

Delta LNA ARENA SPORT 600W series with DALI-2 & D4i or RDM/DMX control functions are constant current non-isolated LED drivers. It makes an ideal solution for Stadium Lighting due to its low ripple current level and flicker free, which is indispensable for Live TV broadcasting conditions. Also due to its robust design, the LNA-600W is well-suited for industrial lighting, high mast lighting, and horticulture applications. This driver was specifically conceived and intended to offer remarkably high efficiency to achieve substantial energy savings. Additionally, a wide dimming range, advanced control, and autonomous dimming (Midnight Centric Timer) ensure adaptability for dynamic atmospheres and seamless event adjustments. The LNA-600W driver offers a remote-control function, allowing the driver to be installed up to 300 meters from the luminaire, which provides greater flexibility in installation, operation, and easy maintenance for indoor and outdoor applications.

Additional Dimming Features:

Specification	LNA-600A20AFC□□□□
Smart Timer Dimming (STD)	CLO is a function to make the brightness consistent by compensating the ageing of the light source over the lifetime. It's available in GUI to set starting dimming level (for example 90%) and end of life of the product (for example 50khrs), so that the driver by counting its functioning hours can do a linear interpolation in between starting dimming level at t=0hrs, and go to 100% at t=end of life. This function is not activated by default. For more details, please refer to "LNA/EUCO Series Programming Tool User Manual".

6. Internal Over Temperature Protection

This function ensures that the driver works under safe operating temperature condition. When the ambient temperature exceeds a fixed threshold ($T_{c1} = 90^{\circ}\text{C}$ typical), the output current will decrease to 20% automatically to reduce the internal temperature of the driver. The minimum output current ratio is 20% of the value before the internal OTP enabled. The output current will recover to 100% when the internal temperature is below recovery threshold ($T_{c2} = 80^{\circ}\text{C}$ typical).

7. External SPD requirement for extra LED fixture common mode surge protection

Delta driver has strong capability(10kV) against unexpected surge pulses but considering that end-users may install an external surge protector device (SPD) for greater protection capabilities, therefor Delta recommends that the SPD should be installed on the AC input side, and strongly suggests not to install the SPD on the output side of driver or in front of the LED modules to avoid irreparable damage to the driver.
